**Flexibility and freedom  
for your business**

We believe in transforming businesses through intelligent and tailored technological solutions.

We configure networks and systems to help your business connect with more places, serve more customers and employ more people.

But it's not just about powering your operations, it's about us investing in your business as much as you do. Thinking about tomorrow and not just today, supporting you to achieve great things through technology.

That's why we never outsource our support services, so our team of technical experts are always here when you need them.

# M247 Services

M247 products are developed with business growth in mind, whatever your requirements we have the technology to help you transform.

## MConnect

Connections that count  
Tailored connectivity for every need

## MHost&Cloud

Flexible and secure  
access to your assets

## MSecure

Tailored security options  
that offer powerful protection

## MCommunicate

Grow your communication capabilities

# M247 Cloud Solutions

THE FLEXIBILITY AND SECURITY OF REMOTE HOSTING

## **MCloud offers on-demand storage, processing and connectivity that puts you in complete control.**

Our cloud infrastructure gives you a reliable, stable platform to host and run all your applications, together with infinite scalability. You can choose between 'public' and 'private' architectures to suit your organisation, and our expert engineers monitor and manage the platform round-the-clock to give you complete peace of mind.

Centralising data and sharing resources reduce IT costs and help your business be more agile, so you can easily keep up to date with hardware, software and upgrades without massive up-front expense.

The advanced features of our industry-leading management system put you in total control too, giving you full administrative capabilities via remote access to your virtual servers.

## Flexibility Centred on Your Business

Having your systems centrally hosted means your business can grow and expand in a manageable way, without large capital expenditure.

The demand for hardware performance, storage, processing and memory is ever-increasing, particularly as a business grows. With MCloud, we'll work with you to create your ideal solution, accessible privately or publicly across the internet, to make your IT easy to manage, ultimately scalable and more efficient.

We've been supplying infrastructure services to some of the country's largest public and private sector organisations for well over a decade. And our commitment to quality and security – demonstrated by our ISO accreditations – is second to none. In short, it means we can design, deliver and operate the right cloud solution to benefit your business.

## Virtualisation and Cloud

REDUCE IT COSTS, INCREASE SCALE AND POWER

Our combination of virtualisation and cloud services offers a host of business benefits, with some of your IT infrastructure on your premises and some in the Cloud.

This hybrid environment combines virtual in-house servers to run your applications, with the added resilience of data centre hosting so you can reduce your IT overheads with the flexibility to add scale and power when you need to.

**Fast roll-out and configuration** – add or remove hardware at the click of a button

**Improve performance** – deploy workloads faster, increase IT performance, availability and automate operations

**Complete security** – each virtual server is completely isolated from the next, and can operate independently

**Reduce costs** – no need to worry about hardware upgrades, replacements, configuration or security patches, so your IT is simpler to manage with low monthly costs and no set up fees

Presence in  
**over 40**  
data centres globally

# Global Network Coverage

M247's portfolio of internationally enabled products encompasses everything from global MPLS Connectivity, Public and Private Cloud infrastructure and Hosting, to a suite of Security and Communication Services that enable you to operate your business at a truly globally integrated scale.
